**Services Provided:**  
Turnkey Design-Build

**Project Size:**  
14,500 square feet

## **Turn-Key Design-Build Terminal Completed at Raleigh Executive Jetport**

Sanford Contractors was hired to complete a turnkey design-build project for Sanford-Lee County Airport Authority. Raleigh Executive Jetport's current terminal needed to be updated to meet growing demand and future growth.

This 14,500 square foot design-build project for the premier gateway to Raleigh and the entire Research Triangle for corporate flights and recreational aviation was a collaborative effort. Sanford Contractors was brought in for both design and construction.

As the Design-Build team, they provided recommendations, addressed necessary changes, and managed a team of trade partners, including McKim & Creed and Sherman Architecture.

Attention to detail and strong communication allowed Sanford Contractors to complete the project on time and within budget. The updated terminal will allow the Jetport to better serve all pilots and aircraft flying in and out of the region.
