2019

Services Provided:

- Existing Structure Removal
- Clearing and Grubbing
- Earthwork and Storm Drainage
- Bridge Construction
- Curb, Base and Paving

Project Size:

Two-Span, Cored Slab
Bridge Replacement

Emergency Bridge Replacement Delivered in Bladen County

In the wake of Hurricane Florence's devastating landfall in 2018, Bladen County, NC, was inundated with nearly three feet of rain, severely impacting local infrastructure. Among the damage was a key bridge compromised by the storm's force.

When it was determined that the bridge was no longer safe for traffic, NCDOT turned to Sanford Contractors to lead the replacement effort.

Sanford Contractors partnered with STV Engineers to deliver a swift and effective solution. Following an on-site assessment of the damaged structure, the two teams moved quickly, with STV taking the lead on design while Sanford Contractors began construction planning in parallel.

The result was a successful delivery of a new two-span, cored slab bridge just four months later. This project demonstrated Sanford Contractors' commitment to quality, efficiency, and exceeding client expectations.
